INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP2005/005311

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: 8-12
because they relate to subject matter not required to be searched by this Authority, namely:
The inventions as set forth in claims 8 to 12 pertain to methods for treatment of the human body by therapy.
(Article 17(2)(a)(i) of the PCT, Rule 39.1(iv) of the Regulations under the PCT)
2. ☐ Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

o With respect to claims 1-7 and 13-20:

All the inventions of claims 2-7 directly or indirectly quote claim 1, and it appears that the technical matter common to the inventions of claims 1-7 is "pharmaceutical composition capable of suppressing the multiplication of synovial cells" claimed in claim 1.

On the other hand, all the inventions of claims 14-20 directly or indirectly quote claim 13, and it appears that the technical matter common to the inventions of claims 13-20 is "pharmaceutical composition comprising a substance capable of suppressing the production of interleukin 6" claimed in claim 1.
(Continued to extra sheet)

1. ☒ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
☒ No protest accompanied the payment of additional search fees.

INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP2005/005311

Continuation of Box No.III of continuation of first sheet (2)

Although it appears that the technical matter common to the inventions of claims 1-7 and the inventions of claims 13-20 is a pharmaceutical composition per se, the pharmaceutical composition per se is a technical matter publicly known by persons skilled in the art to which the inventions pertain. Further, with respect to the "pharmaceutical composition capable of suppressing the multiplication of synovial cells" and "pharmaceutical composition comprising a substance capable of suppressing the production of interleukin 6" as well, they are a publicly known matter as respectively described in JP 2003-89647 A and WO 00/38693 A1, and hence this matter cannot be special technical features.

Consequently, these inventions cannot be stated as being linked with each other so as to form a single general inventive concept and hence fail to satisfy the requirement of unity of invention.

Therefore, it appears that the claims 1-7 and 13-20 claim the following two inventions not forming a single general inventive concept:

- 1) invention of claims 1-7, and
- 2) invention of claims 13-20.

With respect to claims 1-3, 7, 13-15, 19 and 20:

All the inventions of these claims relate to pharmaceuticals, and the active ingredients thereof are only defined by their functions.

However, since from provided description, what chemical structures give compounds with the functions cannot be stated as being obvious to even persons skilled in the art to which the inventions pertain, simply specifying of the functions is not sufficient to clarify what compounds are active ingredients.

Further, according to the contents of the description of this application, the compositions whose concrete results showing the functions are ascertained are only those containing nucleic acids specified in claims 4 to 6 and 16 to 18. Since there is no description as to those containing other ingredients, it does not appear that with respect to those as well, exhibiting of the same activity as mentioned in the description has been shown.

Therefore, in view of the way of drafting of claims 1-3, 7, 13-15, 19 and 20, the inventions of these claims are unclear. Further, in view of the way of drafting of the description, it cannot be stated that the description is sufficiently clear and complete for the inventions of the claims to be carried out by persons skilled in the art to which the inventions pertain, and it cannot be stated that the description is drafted so as to fully support the inventions of these claims (PCT Article 5 and Article 6).

(continued to next page)

INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP2005/005311

As the description of this application is lacking in the support for the inventions of these claims, it is to be noted that in the preparation of this international search report, prior art search has been limited to those whose active ingredients are nucleic acids specified in claims 4 to 6 and 16 to 18 and rational scope based on the contents of the description.
